Dear Steve:

As required in the secrecy agreement, we consider information contained in Anaconda Report No. 81-23, October, 1981 as proprietary and confidential, including our evaluations and conclusions relating to information in the public domain. We also consider the information verbally transmitted during our meeting of December 8 relating to our operations at Columbia Falls and Sebree, which appears in the Minutes of Meeting dated 14 December 1981, to be confidential.

I have reviewed the meeting minutes forwarded under cover of your letter of December 17, 1981. According to our notes, we agreed to exchange potlining composition data, which should be included as an item in the "Decisions Taken" section. Additionally, we would suggest rewording the third paragraph under "Discussion" as follows:

"Anaconda's primary interest is the most economical environmentally acceptable disposal of potlining; but would also like to recover fluoride values in a form suitable for recycling to cells, if economical, as they currently purchase their total requirements of  $AlF_3$  at approximately US\$950/ST."

Happy New Year. I look forward to seeing you in Tucson January 12,

Yours truly,

E. L. CAMBRIDGE
